

JESSE (YUBO) QIN, PhD

ENTERPRISE AI DEPLOYMENT LEADER

New York, NY | jesseqin.office@gmail.com | linkedin.com/in/jesseqin-phd | jesseqin.me

EXECUTIVE PROFILE

PhD-trained enterprise AI systems and deployment leader with 10+ years across applied AI, distributed systems, product engineering, and technical operations. Turns ambiguous workflows and fragmented data into secure, governed, measurable systems - from architecture and prototyping through evaluation, UAT, rollout, and adoption. Led production platforms serving 18M+ users at 99.99% uptime, reduced cloud spend by approximately \$500K in 90 days, and built recommendation capabilities associated with 43% higher engagement and 2x video watch time.

CORE EXPERTISE

Enterprise AI Architecture | Technical Discovery & Scoping | RAG & Context Graphs | Ontology & Knowledge Graphs | Agent Workflows | Evaluation & UAT | RBAC/ReBAC & Provenance | Production Reliability | Customer Delivery | Cost Optimization
Python | FastAPI | SQL | Elasticsearch | REST APIs | Docker | AWS & GCP | CI/CD | Grafana | PagerDuty | Databricks | PySpark | Power BI & Tableau

PROFESSIONAL EXPERIENCE

KAMIWAZA AI | Senior Member of Technical Staff | 2025-Present

- Build enterprise AI infrastructure and product capabilities that turn distributed organizational data into governed, agent-ready context for real workflows.
- Work across architecture, prototyping, and delivery for retrieval, ontology/knowledge graph, permission-aware workflows, evaluation, and UAT; translate enterprise constraints into reusable platform patterns.
- Partner with product, engineering, and customer-facing teams to move ambiguous requirements toward shipped systems, emphasizing provenance, auditability, access boundaries, reliability, and adoption.

KOODALL AI | Vice President of TechOps, Founding Team | 2024-2025

- Led technical operations and 0-to-1 backend architecture for GenAI video, AR, and recommendation products using Python, FastAPI, Docker, and AWS; connected product, design, and business priorities to engineering execution.
- Established observability, cost tracking, security audit logging, and delivery practices that improved production readiness across multiple AI product initiatives.

GETTR USA | Director of TechOps; Senior Data Analytics Engineer; Backend Engineer | 2021-2024

- Led platform engineering and technical operations for a global social platform serving 18M+ users; sustained 99.99% uptime through high-availability design, disaster recovery, monitoring, alerting, and data replication.
- Reduced AWS cloud spend by approximately \$500K within 90 days through workload, architecture, and service optimization while maintaining production reliability.
- Owned operational support across moderation, legal workflows, mobile releases, and trust-and-safety infrastructure, aligning incident response with business and regulatory priorities.
- Designed and deployed a recommendation system combining user behavior, content similarity, and social signals; increased short-video engagement by 43% and doubled watch time.
- Built the platform's 0-to-1 backend foundation, Elasticsearch search capabilities, analytics and recommendation data pipelines, and executive dashboards for MAU, DAU, retention, and product decisions.

RUTGERS INFORMATICS DISCOVERY INSTITUTE | Graduate Researcher | 2015-2021

- Conducted doctoral research in distributed systems, intelligent data discovery, knowledge networks, caching, and workflow scheduling; built scalable data delivery workflows for national observatories including OOI and GAGE.
- Contributed to Rutgers' Top500-ranked HPC system through performance testing across compute, storage, and network layers; published 7+ peer-reviewed papers under the name Yubo Qin on data-intensive and distributed computing.

LEADERSHIP & THOUGHT LEADERSHIP

- Founder, Solo Unicorn Club (2025-Present) - Build a New York and North America AI-builder community and public operating lab focused on AI-augmented work, founder workflows, and AI-native organizations.
- Speaker, Knowledge Graph Conference 2026; author of a public Context Graph reference model for organizing decisions, evidence, ownership, provenance, and permissions as usable context for people and AI agents.

EDUCATION & CREDENTIALS

NYU Stern School of Business - M.S., Business Analytics and AI, 2025

Rutgers University - Ph.D., Computer Engineering, 2021; M.S., Computer Engineering, 2016

Project Management Professional (PMP), Project Management Institute, 2023
